Class 47 Diesel Locomotive

Thank you for your choice of the Bachmann Branchline Class 47 diesel locomotive.

General

The mechanism of this model requires running in (without a load) for approximately 1 hour in each direction at moderate speed to allow the gear train to bed in.

Bachmann Branchline locomotives are not suitable for use on track tighter than second radius (approx. 18 inches).

Body removal

Remove the screws indicated 'A' beside the bogies and at each end of the locomotive and unclip by each cab door, indicated 'B'. (note diagram shows bogies removed only for clarity)

DCC Decoder fitting to non DCC fitted loco

This model has a 21-pin interface for a decoder with an appropriate fitting. An adapter is available from retailers to use a decoder with an 8-pin plug in the model. (item L38004 / 36-559)

- ▶ It is recommended that the running in as above be carried out using a DC power supply before moving on to fit a DCC decoder
- ▶ If this is a 'DCC Onboard' or 'DCC Sound' model please also refer the accompanying DCC instruction sheet.

Liahts

When the locomotive is fitted with a DCC decoder the lights can be turned on/off with these handset keys:

F0 (F10 on EZ Command) Directional head and tail lights

The **tail lights** can be separately turned off using the switch beneath the fuel/water tank

Lubrication

When required, sparingly lubricate the motor bearings using plastic compatible light oil and the gear train with model grease as indicated on the diagram.

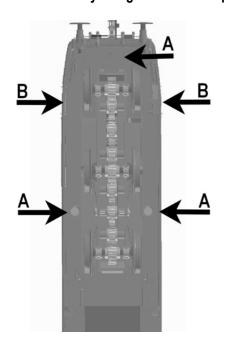

Bufferbeam parts

The locomotive dummy screw coupling and the brake and steam pipes fit as shown on the diagram. The pipes are not suitable for use with the functional coupler on tight curves.

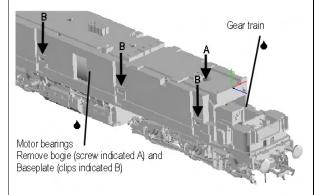

▶ The model should be handled carefully as it has many finely detailed parts. It is not suitable for persons under 14 years.
